DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 11-15 and 24 rejected under 35 U.S.C. 103(a) as being unpatentable over Fourtet(US 6,345,173). The reference by Fourtet et al discloses a PLL system(see figures 3 and 4) with direct modulation (combination of modulating data and phase error) tuning input to a VCO(160,260); also, channel selection by way of the variable feedback divider(263) is shown. Not in Col. 6, lines 52-55, that an adjustable attenuator(not shown) maybe

Art Unit: 2817

The reference does not show a DCO implementation with tuning control word input (such as a DAC and analog VCO).

With regards this, the use of a DCO instead of the analog VCO alone is conventional and notoriously well known in the art. All digital PLL systems incorporating the digitally controlled VCO have been used in the prior art to allow a more compact and integrated system especially for digital communication systems.

In light of the above it would have been obvious for one of ordinary skill in the art to have recognized that the loop of Fourtet et al could be implemented in digital form so as to take advantage of the integrated package.

Allowable Subject Matter

Claims 1-10, 17-23 and 25 are allowed

4. Claim 16 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
